

Substitution and Area between Curves

Area between Curves

Let  $f$  be continuous on the symmetric interval  $[-a, a]$

If  $f$  and  $g$  are continuous with  $f(x) \geq g(x)$  through  $[a, b]$ ,

$$\int_{-1}^1 \frac{5r}{(4+r^2)^2} dr$$

$$\int_0^1 \sqrt{t^5 + 2t} (5t^4 + 2) dt$$
