

8.5 Finding Equations of Lines

Name _____

Slope

Point-slope form of a line

$$(3, -4) \quad m = \frac{4}{7}$$

$$\left(-2, -\frac{3}{2}\right) \quad m = -2$$

$$(3, -4) \quad m = 0$$

$$\left(-2, -\frac{3}{2}\right) \quad m \text{ is undefined}$$

$(3,-2)$ and $(1,7)$

$(-4,0)$ and $(4,2)$

$(3,-2)$ and $(3,7)$

$(-4,2)$ and $(4,2)$

Remember that slope is really a change and the y-intercept is a point or a given value
